IV. NEED ANALYSIS :

With the development of civilization, human needs to keep on increasing their fulfillment needed simulation, analysis of lot of information's too became essential. Now the individual responsibilities of every responsible citizen grew up to such a light that it is difficult for him to handle them successfully. Human memory too has its own limitations. So here comes the computer to help in all kind of decision making, whether it is highly complicated research work, war strategy, market speculations or day-to-day need of human life etc. As a matter of fact every individual activity needs decision making. So the computer is the need of organizations and also the need of individual being. It will not be exaggeration if we say that it is "Information era". So is the need for developing a course for "Information Technology" at diploma level. It is supposed that such personnel will not face any dearth of employment because of omnipresent nature of computer.

The syllabus for diploma in "Information Technology" has been developed to meet above mentioned aims. Obviously achievement of any aim requires knowledge of the means and procedures of their utilization. With this view various courses have been carefully selected and their length and depth decided by experienced experts in the field.
